To Charge The Battery

Prompt

• Battery is only allowed to be charged by the original charger or our approved accessories. The mobile phone is with a non-removable built-in battery, you can replace the battery only by the company authorized professional service center. Do not disassemble the battery yourself.
• The battery can be charged repeatedly, but the battery is consumption good. If there's a significant reduction in the standby time of the phone, do not replace the battery yourself, please contact the company's authorized service center to replace the original battery.
• The phone should be charged before the first use, you can charge the phone by charger or through the USB data cable to connect the device to the computer to charge the battery.
• The phone will gradually discharge if it's long-term unused. Before normal use, the phone have to be recharged.
• If the battery is exhausted, the phone may not be able to boot immediately when you just plug in the charger, this is a normal phenomenon. Please continue to charge for some time, and then boot it to use.
• For the new or long-term unused battery, we suggest that you charge the battery. When the charge is completed, please unplug the charger and charging data line in time.
• The new battery or long-term unused battery needs to be fully charged and discharged after several times in order to achieve its best state.

Method of using the charger

In order to improve the charging efficiency and ensure the safety of charging, please use 220V alternating current. Connect the charger and charging data line of the phone and then insert them into the power socket. Do not allow the charging data line to be damaged or affected. Connect the charging data line to the phone charging identification for charging. When the charge is completed, please unplug the charger and charging data line in time. In order to avoid the danger of electric shock, please unplug it from the power source before cleaning the charger. For safety, do not use the charger in the outdoor or damp environment.

Quick Guide

1.Projection

When you need to share the video, pictures, documents in the phone, you can open the projection, it will bring more fun.

Open/close the projection:

Slide open the projection lens cover, to open the projection automatically, slide off the projection lens cover, the projection is automatically closed.

Open or close projection in Settings > projection menu (Notice: Projection bright and low light mode can be set up)

Click on the APP icon in the application interface to open or close the projection.

Click the "projection" quick open / close icon in the drop shortcut task bar to open or close the projection.

Notice:

When dialing and incoming calls, the projection will be automatically closed, after the end of the call, you need to manually open the projection to continue to use.

In the open projection state, the projection will be unstable when the phone battery power is less than 15% , it's caused by insufficient power, so the user is required to charge in time to ensure adequate power.

2.Remote Control Wizard

This phone supports the remote control function of TV, TV box, air conditioning, DVD, audio and other infrared receiving equipment. You don't need to worry about the troubles caused by forgetting the home appliance remote control. It can replace almost all household appliances remote control, so that life becomes more comfortable and convenient.

3.WLAN

WLAN provides a furthest 300 feet (100M) wireless network access. To use WLAN on your phone, you must connect to a wireless access point or "hot spot".

Notice: The availability and coverage of WLAN signals is dependent on the numbers, the infrastructure, and the penetration object of other signals.

4.Video Phone

Video phone is a communication mode based on internet and mobile internet terminal to transfer voice and image(user's bust, photos, items, etc.) by phones in real-time. Enter a number to click on the video dial, the other side picks up the phone and then they can make a video call through the camera.

5.Conference Call

Also known as two-way call / conference call, this function requires SIM card to be opened with conference call function.

The phone is with the one-way call function already.

Click "add call", dial a one-way call again (or pick up an incoming call, the mobile phone enabled by default "call waiting" (settings - call settings - voice call - other settings), when the two-way calls is established, you can view the status on the call interface.

Select "merge call" - you can merge two calls into a multi-party call.

After the establishment of a multi-party call, you can enter the menu by the small arrow, to separate the phone or hang up a phone call.

6.Messages

Key point: Messages take the number of the other side for title, and be saved in the form of a chat record "conversation", rather than the usual folder structure. The message received would be displayed on the left side of the dialog, and the message sent would be displayed on the right side of the dialog.

Send MMS to other numbers: The newly created message is SMS, the user can select or upload pictures, sound, text etc. and edit, when edit is finished, the message would be automatically turned to MMS, and then you can click "send" to send.

Message group sending to multiple numbers: You can input multiple numbers into the input box directly, each number should be separated by comma in English. Click the icon on the right side of the recipient, you can choose the contacts from the contact list for group sending.

7.Browser

Click the browser icon and enter the start page of the browser.

Click on the web thumbnail image or input the website you want to acces in the address bar (such as www.danew.com) and click the start button on the keyboard

To open a new browser window, click on the blank page to display the menu, please click the tab window icon on the menu, click the plus icon and then input the URL.

To switch to a new browser window, click on the blank page to display the menu, please click tab window icon on the menu, select the window you want to switch to.

Browser settings

General settings, including homepage settings and other functions.

Privacy and security, including the removal of historical records, to clear the cache and other functions.

Auxiliary functions, including text size, point press to scaling and other functions.

Bandwidth management, to load the pictures or not when enter the web page.

8.Using the Phone Storage as U Flash Disk

To transfer music, photos, and other files from your computer to your memory card, you have to set the phone storage card to U flash disk first.

Selecting the "USB connected" option can load the U flash disk and store music, photos, and other files into your memory card or the built-in memory card.

Selecting the option to use as a USB storage device can open the right options.

You can view camera pictures directly in the PC side when it's connected.

Set Your Mobile Phone

1.Wireless & network

Speak the password.
Touch and hold delay.
Install web script.
Fast boot. Closed / open fast boot function

4: About mobile phones.
To update the system wireless, view model, version and other information.

Mobile Phone Application Notice

Your phone is a product with excellent design and process, and should be used carefully. The following advice can help you to follow the warranty and prolong the service life of your mobile phone.

1）Put the mobile phone and its parts in a place where children can't get it.

2）Keep your cell phone dry, rain, moisture and all kinds of fluids that may contain minerals that will erode the electronic circuitry.

3）Do not use wet hands to touch the phone when the battery is charged, it will cause an electric shock damage to people or damage to the phone.

4）Do not put the phone in an environment of high temperature. The high temperature will shorten the life of electronic equipment, damage the battery, distort or melt some plastic parts.

5）Do not put the phone in an environment of low temperature. When the temperature rises, the internal phone will be able to generate water vapor to damage the electronic line.

6）Do not put the phone in the vicinity of a lighted cigarette, an open flame, or any heat source.

7）Do not disassemble the cell phone, non professional treatment will lead to damage to the phone.

8）Do not drop from a height, knock or shake the phone, rude way of use will damage the internal circuit boards.

9）Do not use paint on the phone, because the paint will block the headset, microphone or other mobile accessories, and lead to the phone can't be used in a normal way.

10）Use a clean, soft, dry cloth to clean the camera. Do not use harmful chemicals, cleaning agents and other liquid to clean the mobile phones.

11）Failures, such as mobile phones, batteries, chargers or mobile phone accessories, please send to the nearest qualified service center for inspection.

12）Service center staff will provide you with help, if necessary, will arrange maintenance for the phone.

13）Only to update the operating system that releases by Super Grand, do not re-install the system yourself, otherwise the consequences conceited.

14）Do not project to the human eye when you open the projection, to avoid damage to the human eye.

Environment-Friendly Instructions

Name and content of toxic substances or elements in the product

Part Name	(Pb)	(Hg)	(Cd)	(Cr(VI))	(PBB)	(PBB)
Phone shell	O	O	O	O	O	O
PCBA	O	O	O	O	O	O
Components	O	O	O	O	O	O
LED screen	O	O	O	O	O	O
Camera	O	O	O	O	O	O
Charger	×	O	O	O	O	O
Data cable	O	O	O	O	O	O

"O" means that the content of the toxic and harmful substances in all homogeneous materials of this part is under the limited requirements of the SJ/T11363-2006.

"X" means the toxic and harmful substances at least in one of the homogeneous materials of the component content exceeded the limited demand of the SJ/T11363-2006, the reason is there's no mature alternative technologies in the industry, but this part still conforms to the specification of the 2011 / 65 / EU.

The environment-friendly use period of the product is 20 years. The environment-friendly use period of the battery and other parts of the product may be different from the product's environment-friendly use period. Only when this product is used in the normal condition of the specification.

Regulatory Information

Regulatory Information Your Danew mobile device is designed to comply with national regulatory requirements and international standards. For full compliance statements and details, please refer to the regulatory information in your product guides.

European Union Directives Conformance Statement

The following CE compliance information is applicable to Danew mobile devices that carry one of the following CE marks:

CE 0700

Hereby Danew declares that this product is in compliance with:
• The essential requirements and other relevant provisions of Directive 1995/5/EC
• All other relevant EU Directives
For products that support Wi-Fi 802.11a/ac (as defined in your product information): Outside the United States, this device is restricted to indoor use when operating in the 5.15 to 5.25 Ghz (802.11a/ac) Wi-Fi frequency band.

Disposal & Recycling

Please don't dispose of mobile devices or electrical accessories (such as chargers, headsets, or batteries) with your household waste. Warning: Never dispose of batteries, either separately or within a mobile device, in a fire because they may explode. Mobile devices or electrical accessories should be disposed of in accordance with the national collection and recycling schemes operated by your local or regional authority. Or, you may return unwanted Danew mobile devices and electrical accessories to any Danew Approved Service Center in your region

This product is RoHS compliant.

Packaging & Product Guides

Product packaging and product guides should only be disposed of in accordance with national collection and recycling requirements. Please contact your regional authorities for more details.

SAR

YOUR MOBILE DEVICE MEETS FCC AND IC LIMITS FOR EXPOSURE TO RADIO WAVES.

Your mobile device is a radio transmitter and receiver. It is designed not to exceed the limits for exposure to radio waves (radio frequency electromagnetic fields) adopted by the Federal Communications Commission (FCC) and Industry Canada (IC). These limits include a substantial safety margin designed to assure the safety of all persons, regardless of age and health.

The radio wave exposure guidelines use a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit for mobile devices is 2 W/kg. Tests for SAR are conducted using standard operating positions with the device transmitting at its highest certified power level in all tested frequency bands. The highest SAR values under the FCC and IC guidelines for your device model are listed below:::

Highest SAR values for this device

Head SAR	0,183 W/kg
Body SAR	0,603 W/kg

During use, the actual SAR values for your device are usually well below the values stated. This is because, for purposes of system efficiency and to minimize interference on the network, the operating power of your mobile device is automatically decreased when full power is not needed for the call. The lower the power output of the device, the lower its SAR value.

If you are interested in further reducing your RF exposure then you can easily do so by limiting your usage or simply using a hands-free kit to keep the device boy the USB head and body.
